FOR IMMEDIATE RELEASE
August 12, 2015

NEWLY 8A-CERTIFIED ITC LEVERAGES SMALL SIZE AND 20-YEAR TRACK RECORD TO SUPPORT FEDRAMP'S ENTERPRISE-CLASS CLOUD SERVICE

Information Technology Company, LLC (ITC) has been certified as a Federal Risk and Authorization Management Program (FedRAMP) Third Party Assessment Organization (3PAO). FedRAMP provides a standardized approach to security assessment, authorization, and continuous monitoring for Cloud products and services, increasingly relied on by agencies to provide secure and scalable internal and citizen-facing services. Cloud service providers (CSPs) must use a FedRAMP-approved third-party assessor to independently validate and verify their satisfying FedRAMP requirements.

ITC is unique as the only 3PAO with long-term intimate knowledge of and hands-on experience with mainframe technology. Its auditors are expert hands-on mainframe programmers/users with decades of mainframe security perspective.

"For the past 20 years we have provided Federal Information Security Management Act (FISMA) auditing services for many agencies; that huge experience leads us organically into the FedRAMP arena," said Stan King, the company's Chief Technology Officer. "It was a natural line of business for us and one that we are aggressively pursuing. IBM mainframes play a key growing role in cloud processing and many agencies are turning to the massively scalable resource capacity this technology provides for private clouds."

Simultaneously, ITC was certified into the federal government's 8a program which provides business development assistance to companies owned and managed by socially and economically disadvantaged individuals in entering government contracting. Broad program services include mentoring, procurement assistance, business counseling, training, financial assistance, and surety bonding. Inclusion provides ITC greater access to resources assuring accelerated company growth and development.

"Our participation in the 8a program provides the necessary leverage to compete with larger, more established companies in the federal market" says ITC President, Manny Mangilit. "ITC has a remarkable set of skills and resources that we showcase to federal customers. This lets us assure more organizations meeting their technology needs".

About ITC

ITC provides high-technology solutions to federal agencies and commercial customers requiring comprehensive high-quality project support, from planning through delivery and documentation. ITC has a long and successful track record of information technology and data center projects ranging from enterprise architecture design, development and testing, to mission-critical applications support and administration.

An IBM Business Partner, ITC specializes in IBM zSeries and pSeries computing platforms; the company is exclusive worldwide OEM for IBM zPDT technology seamlessly offloading mainframe development to a 100% mainframe-compatible, Linux-based x86 server, with lower cost of acquisition/operation and full isolation from production workload.

Within those IBM hardware environments ITC provides superior expertise in z/OS, z/VM, z/VSE, and Linux on z Systems, and supports numerous application environments such as DB2, IMS, CICS, Oracle, MQSeries, SAS, RACF, CA-ACF2, and CA-Top Secret.
