

Enhancements in this release (57.16)

zPDT Software Update, release date October 3rd, 2023

This release of GA-11 (57.16) includes the following updates:

New Function

- Introducing the support for the new Gen2 1090 hardware token.

Fixed in this release

- The timeouts associated with the awsstop command have been slightly lengthened to avoid unexpected messages while ending zPDT operation.
- Add Leap second switch in devmap
 - Please read the **Addendum**, section “**LEAP SECONDS**”, in this document.
- Crypto Express 8s level, CCA version 8.1.71i . This provides some minor internal fixes.

The previous release of GA-11 (57.10) included the following updates:

- DEFLATE is active in this release!
- **3. Fixed in this release**
- Fixed an obscure convert Unicode instruction problem.
- New ap_acptool command that works with the emulated cryptographic adapter and will eventually replace the current acptool command, introduced in base GA11 release. See the command manpage for more information.
- **Token Licensing zip file validation prior to unzipping.**
